

Calf Pen Systems

Durable, convenient and innovative systems for raising calves

GEA Farm Equipment | Norbco

engineering for a better world

GEA Farm Technologies

Multi-pen calf gate system

Calf pen systems are made of heavy-duty galvanized steel frames, with easy-to-clean corrugated poly panels. Multiple designs are available so pens can be customized to your calf raising needs.

Individual calf pens within a large gate — available with two, three or four pens in each gate.

Cleaning is easier and more flexible — remove dividers, open main gate and clean pens from the front, without disturbing other calves.

Durable galvanized frame — made from 2" square, high-tensile strength, galvanized tubing. Main gate has 1" adjustable hinges and automatic latches.

Simple installation — main gates are mounted to a gate post every 8 ft., 12 ft. or 16 ft. on center.

Variable pen sizes — 48" wide and 6 ft. or 7 ft. long.

Calf gate features

Modern calf gate design — two separate feeding holes with a divider panel prevents cross-contamination of feed or water.

Automatic gate latch on calf gate — simple and user friendly latches make these gates secure and easy to open.

Flexible features — adjustable height for calf gate and pail holders.

Additional options — single or double rows, headlocks and bottle holders are available.

Individual calf pens

Stand-alone calf pens — can be used as a single pen or multiple pens in a row.

Durable mounting system — front standpipes anchor securely to the floor. The rear mounting channels can be anchored to the floor or to the wall for an outside single row.

Cleaning made easy — simply remove calves, then remove poly panels for cleaning. Pens will be cleaned from the side, one complete row at a time. Corrugated poly panels are durable, stain resistant and easy to clean.

Variable pen sizes — 42" or 48" wide and 6 ft. or 7 ft. long.

Individual calf pens

Poly panel latches

Front panel latch — holds poly panel in place at the front of pen.

Easy to operate — latch flips upward to release panel.

Front panel latch

Rear panel latch

Rear panel latch — this holds the poly panel in place at the rear of the pen.

No wrenches required — a simple clevis pin makes removal quick and easy.

We live our values.

Excellence • Passion • Integrity • Responsibility • GEA-versity

GEA Group is a global engineering company with multi-billion euro sales and operations in more than 50 countries. Founded in 1881, the company is one of the largest providers of innovative equipment and process technology. GEA Group is listed in the STOXX® Europe 600 index.
