

# Derma-Kote<sup>®</sup>

U.S. Patent No. 6,902,747  
U.S. Patent No. 7,153,527

## Iodine Sanitizing Teat Conditioner/Winter Teat Dip

Derma-Kote is a unique teat dip containing 0.5% (5,000 ppm) iodine with 74% emollient providing potent killing ability with unparalleled skin conditioning. The well known germicidal power of iodine kills mastitis-causing bacteria on contact while the emollient helps heal damaged teat skin and protects the teats from the effects of harsh weather, especially in winter.

### Features and Benefits

- **Superior Skin Conditioning**

Contains 74% emollient which delivers unequaled skin protection and conditioning.

- **Proven Effective**

In a teat dip protocol test recommended by the NMC and in field trials across the U.S., Derma-Kote has been proven to significantly reduce new intramammary infections.

- **Excellent Healing Properties**

Aids in the healing and softening of teats and teat ends that have been chapped or injured, therefore diminishing the possibility of skin related mastitis problems.

- **Winter Teat Dip Qualities**

Winter's low temperatures and humidity create ideal conditions for teat chapping and frostbite. With proper housing management, Derma-Kote will reduce teat chapping and help lessen the chance of frostbite because of its 74% emollient formulation and non-freezing capabilities.

- **Excellent Visibility**

The green color provides visible confirmation that teats have been dipped properly.

- **Ready to Use**

Stable formulation requires no mixing.

- **100% Customer Satisfaction**

All GEA Farm Technologies hygiene products have a 100% Customer Satisfaction Guarantee.

# Derma-Kote® U.S. Patent No. 6,902,747 and 7,153,527

Iodine Sanitizing Teat Conditioner/Winter Teat Dip

## Directions for Use

Use at full strength. Do not dilute.

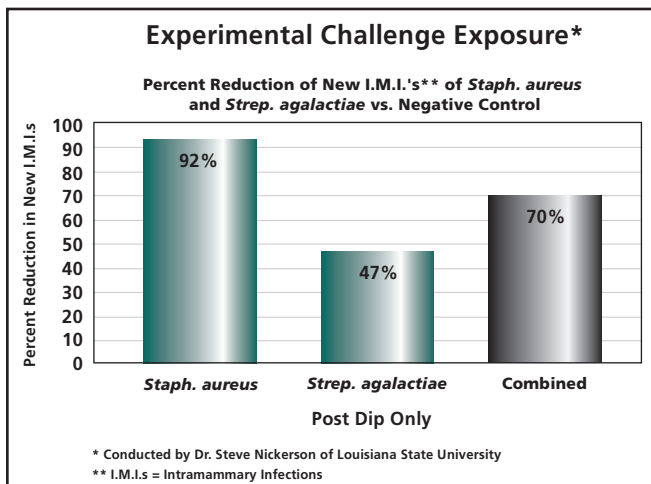

**Pre-Dipping:** Before milking, dip each teat with a GEA Farm Technologies sanitizing teat dip. After 15 to 30 seconds, dry each teat thoroughly with a single service towel. If the udder and teats are heavily soiled, wash with a sanitizing solution and dry before application of a GEA Farm Technologies sanitizing teat dip.

**Post-Dipping:** Immediately after milking, thoroughly cover each teat with Derma-Kote. Allow teats to air dry. Do not wipe. At the end of lactation, apply this product daily for one week after the last milking. In addition, begin application of this product about one week prior to calving. Post dip only. It is not recommended for spraying.

If a common teat dip cup is used for application, a fresh solution should always be used at each milking. The teat dip cup should be emptied, cleaned and rinsed with potable water after each milking session or when cup becomes contaminated during milking. Do not pour remaining solution from dip cup back into original container.

## Research

Derma-Kote Iodine Sanitizing Teat Conditioner/Winter Teat Dip has been shown in an Experimental Challenge Study, using procedures outlined by the NMC, to reduce intramammary infections by an average of 70% versus no teat dipping. Derma-Kote was also highly effective in several field trials across the United States.

## Product Properties

- Appearance:** Green liquid
- Odor:** Characteristic Iodine
- Specific Gravity at 77°F (25°C):** 1.04 (water = 1)
- Wetting Ability:** Moderate

## Ordering Information

U.S. (only) SKU	Description
7751-0240-036	Derma-Kote - Case (4x1 gal.) (4x3.78 liters)
7751-0040-008	Derma-Kote - 5 gal. pail (18.9 liters)
7751-0040-012	Derma-Kote - 15 gal. drum (56.7 liters)
7751-0040-011	Derma-Kote - 55 gal. drum (208 liters)
7751-1000-436	Derma-Kote - Literature (pkg of 20)
