

# Teat-Kote®

## Sanitizing Teat Dip

Teat-Kote is a 1% (10,000 ppm) teat dip, formulated to be effective for use in pre- and post-dipping applications (spraying or dipping).

### Features and Benefits

- **Higher Iodine Formulation**

Gives added germicidal protection against product contamination and heavy environmental conditions.

- **Exclusive Triple Emollient System**

Contains lanolin, glycerin and a special therapeutic ingredient to promote a natural moisture balance that keeps teats soft and pliable.

- **Aids in Decreasing Mastitis Cases**

Thoroughly tested iodine formula provides quick, broad-spectrum kill of bacteria and reduces the chance of new intramammary infections.

- **Controlled pH**

Provides kill of bacteria without danger of irritation to cows' teats.

- **Dark Brown Color**

Good staining qualities provide visual confirmation that teats have been dipped or sprayed properly.

- **Ready to Use**

No mixing is required.

- **Freeze/Thaw Stability**

If frozen, this product can be thawed completely, mixed to its original state and used with confidence.

- **100% Customer Satisfaction**

All GEA Farm Technologies hygiene products have a 100% Customer Satisfaction Guarantee.

# Teat-Kote®

## Sanitizing Teat Dip

### Directions for Use

Use at full strength. Do not dilute.

**Indications:** This topical liquid product, when used undiluted as a pre- and post-milking teat dip, effectively aids in reducing the spread of mastitis.

**Pre-Dipping:** Before milking, dip each teat with Teat-Kote. After 15 to 30 seconds, dry each teat thoroughly with a single service towel. If the udder and teats are heavily soiled, wash with a sanitizing solution and dry before application of Teat-Kote.

**Post Dipping:** Immediately after milking, dip each teat with Teat-Kote. Allow teats to air dry. Do not wipe. If outside temperature is below freezing, allow to air dry on the teat before the cow leaves the parlor to prevent freezing. At the end of lactation, apply this product daily for one week after the last milking. In addition, begin application of this product about one week prior to calving.

If a common teat dip cup is used for application, a fresh solution should always be used at each milking. The teat dip cup should be emptied, cleaned and rinsed with potable water after each milking session or when cup becomes contaminated during milking. Do not pour remaining solution from dip cup back into original container.

### Research

Tested in university studies according to protocols recognized by the NMC and proven effective in reducing new infections of mastitis caused by *Staphylococcus aureus* and *Streptococcus agalactiae*. Complete research data available upon request.

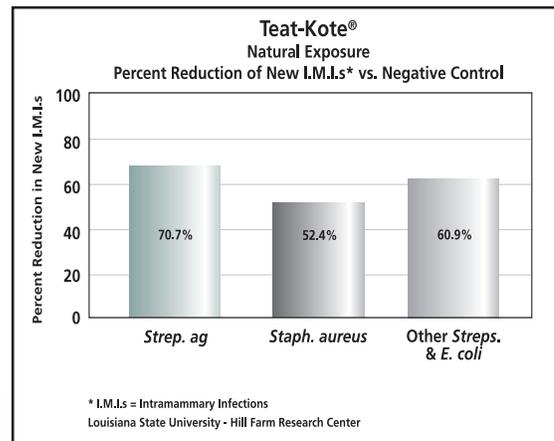

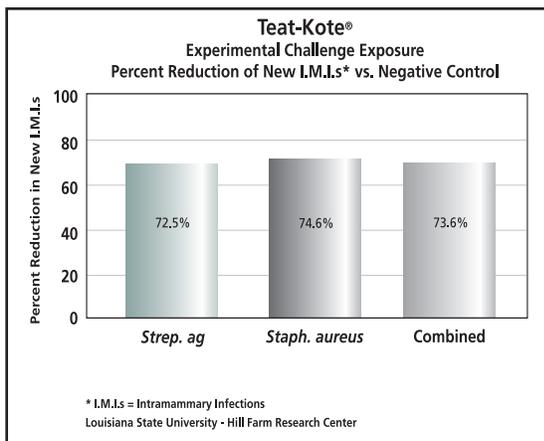

### Product Properties

<b>Appearance:</b>	Dark red-brown liquid
<b>Odor:</b>	Iodine
<b>pH:</b>	5.3 (as is)
<b>Specific Gravity at 77°F (25°C):</b>	1.03 (water = 1)
<b>Wetting Ability:</b>	Excellent

### Ordering Information

#### U.S. (only)
