

Theratec® Plus

Pre & Post Sanitizing Teat Dip with Added Emollient

Theratec Plus is an emollient enhanced version of the number one GEA Farm Technologies teat dip, Theratec®. Theratec Plus is a ready-to-use 0.5% (5,000 ppm) iodine teat dip, formulated to be safe and effective for use in pre- and post-dipping applications (spraying or dipping).

Features and Benefits

- **Finishes What It Starts**

Theratec Plus, with 0.5% iodine, has all the iodine power needed to kill environmental and contagious mastitis-causing pathogens fast and effectively in both pre- and post-dipping applications.

- **Exclusive Triple Emollient System**

Contains lanolin, glycerin and a special moisturizing polymer, PVP. The skin conditioning qualities of PVP are so superior to other polymers that it is used for the therapeutic treatment of skin burns. The triple emollient package in Theratec Plus helps to keep cows' teats soft and pliable.

- **Thick Formulation**

Theratec Plus is fortified with a heavy emollient package for additional product thickness. This increased viscosity enhances product adherence to the teat and makes it more difficult for bacteria to enter the teat canal.

- **Contains Surfactants**

Penetrating surfactants provide excellent wetting qualities to help coat the teat and aid in removing bacteria and soils from teats when used as a pre-dip.

- **Dark Brown Color**

Good staining qualities provide visual confirmation that teats have been dipped or sprayed properly.

- **Controlled pH**

Buffered pH formula provides kill of mastitis-causing organisms without danger of irritation to cows' teats or operators' hands.

- **Ready to Use**

Ready-to-use formulation requires no mixing and maintains stability milking to milking.

- **Freeze/Thaw Stability**

If frozen, this product can be thawed completely, mixed to its original state and used with confidence.

- **100% Customer Satisfaction**

All GEA Farm Technologies hygiene products have a 100% Customer Satisfaction Guarantee.

Theratec® Plus

Pre & Post Sanitizing Teat Dip with Added Emollient

Directions for Use

Use at full strength. Do not dilute.

Indications: This topical liquid product, when used undiluted as a pre- and post-milking teat dip, effectively aids in reducing the spread of mastitis.

Pre-Dipping: Before milking, dip each teat with Theratec Plus. After 15 to 30 seconds, dry each teat thoroughly with a single service towel. If the udder and teats are heavily soiled, wash with a sanitizing solution and dry before application of Theratec Plus.

Post-Dipping: Immediately after milking, dip each teat with Theratec Plus. Allow teats to air dry. Do not wipe. If outside temperature is below freezing, allow to air dry on the teat before the cow leaves the parlor to prevent freezing. At the end of lactation, apply this product daily for one week after the last milking. In addition, begin application of this product about one week prior to calving.

If a common teat dip cup is used for application, a fresh solution should always be used at each milking. The teat dip cup should be emptied, cleaned and rinsed with potable water after each milking session or when cup becomes contaminated during milking. Do not pour remaining solution from dip cup back into original container.

Research

Theratec Plus has been thoroughly tested in an Experimental Challenge (Teat Dip Protocol) consistent with those recommended by the NMC. The results of these studies have shown Theratec Plus to be an excellent germicide and mastitis prevention tool.

Research data available upon request.
