

Velocity Pre™

Pre Milking Non-Iodine Teat Dip

Velocity Pre is a Chlorine dioxide three-component (base, activator and water) sanitizing teat dip system with quick-kill ability during the pre-milking process. Environmental mastitis-causing organisms are no threat to this powerful pre dip.

Features and Benefits

- **Powerful, Broad-Spectrum Germicide**

Once the three components of Velocity Pre are mixed together, very powerful germicides (*Chlorine dioxide* and *Chlorous acid*) are produced. As a result, Velocity Pre is highly effective as a pre-dip against environmental streps and coliforms that are key mastitis-related organisms. Velocity Pre retains its effectiveness for up to 12 hours when mixed as directed (see Directions for Use for further details).

- **Versatile Application**

User friendly and versatile with dip, spray or foaming capabilities.

- **Cleanability**

Specially formulated surfactants help to easily remove soil load on teats for a quick, efficient cow prep.

- **Mixing**

Velocity Pre can easily be manually mixed. An automated blending system is available for those who prefer automated mixing.

- **100% Customer Satisfaction**

All GEA Farm Technologies hygiene products have a 100% Customer Satisfaction Guarantee.

Velocity Pre™

Pre Milking Non-Iodine Teat Dip

Directions for Use

Use only when properly mixed with Velocity Pre Activator, Velocity Pre Base and water.

Always prepare in a well-ventilated area. Add 3 parts of Velocity Pre Base and 2 parts of Velocity Pre Activator to 95 parts of potable water in a clean container. Mix thoroughly. Once mixed, product can remain effective for up to 12 hours.

Pre-Dipping: Before milking, dip each teat with Velocity Pre. After 15 to 30 seconds, dry each teat thoroughly with a single service towel. If the udder and teats are heavily soiled, wash with a sanitizing solution and dry before application of Velocity Pre teat dip.

Research

In an in-house laboratory study, results indicate speed-of-kill and rate-of-kill at 30- and 60 seconds against three very prominent mastitis-causing organisms.
