

# PosiBall Universal Hose Support

Achieve proper positioning of the milking unit for a complete and even milkout

**Simple, effective positioning** — the PosiBall suspends milk and pulsation hoses for optimal weight distribution and allows them to move in unison as the cow moves, for more comfortable milking. Multiple balls along the rope give a wide range of connection points to accommodate almost any udder in the herd.

**Quick, one-hand attach** — the PosiBall stays with the milk hose and is easily accessible for the operator to quickly attach the correct ball in the pocket of the bracket, which is attached to the butt pan (or detacher arm on rotary parlors). This allows operators to properly position the hose support at the correct height for an efficient, comfortable milking on every cow.

**Safety for the cow and operator** — when the detacher lifts the milking unit for removal, the ball comes out of the pocket, disconnecting the PosiBall rope from the butt pan (or rotary detacher arm). There is nothing to get in the operator's way when prepping or post dipping. Also, nothing with sharp edges that could hurt the operator or cow is attached to the curb. Plus, the PosiBall rope itself is made from high-strength polyurethane with smooth edges — there is no chance of injury from chains, hooks or cables.

**Value priced** — an affordable way to ensure the milking unit is properly aligned and supported on the cow.

**Highly compatible** — the PosiBall Universal Hose Support works with virtually any parlor configuration, on any brand of equipment.

**Optional slide track** — designed for parallel stalls. Operators can easily slide the rope attach bracket from left to right and achieve on-center unit positioning, even for those cows that don't stand on center in the stall.

*PosiBall supports the milk hose in the best possible position for safe, effective, and comfortable milking for every cow.*

*The simple squeeze spring hose clamp allows the hose to be slid forward or backward, quickly and easily.*

*The side to side adjustability of the track-mounted PosiBall system makes excellent alignment achievable – even when cow positioning is not on center.*
